

INDEX TO VOL. II.

PLANE GEOMETRY.

	PAGE
On the elementary principles of the application of algebraical symbols to Geometry. By <i>D. F. Gregory</i>	1
On a symmetrical form of the equation to the Parabola ...	14
Demonstrations of expressions for the area of a triangle ...	35
Problem, " Given the n^{th} part of a straight line to find the $(n+1)^{\text{th}}$ part"	47
Demonstrations of two properties of the abscissæ of the angular points of a polygon circumscribing a parabola	48
Investigation of the general equation to diametral curves ...	76
On the general theory of the loci of curvilinear intersection ...	85
On the general interpretation of equations between two variables in algebraic geometry. By <i>W. Walton</i>	103
On the general theory of multiple points. By <i>W. Walton</i> ...	155
Simple demonstration of a property of the conic sections ...	202
On the existence of real asymptotes to impossible branches of curves	236
On a theorem in the geometry of position	267
Analytical demonstrations of Stewart's theorems. By <i>R. L. Ellis</i>	271

ANALYTICAL GEOMETRY OF THREE DIMENSIONS.

On the number of normals which can be drawn from a given point to an algebraical surface. By <i>M. Terquem</i>	11
Investigation of the locus of points for which the sum of the squares of the normals drawn from them to a surface of the second order is constant. By <i>M. Terquem</i>	13
Condition that a surface should be touched by a plane in a curved line	22
Applications of the method of spherical co-ordinates ...	37
On the perspective of the co-ordinate planes ...	92
On the lines of curvature in an ellipsoid. By <i>R. L. Ellis</i> ...	133
Geometrical interpretation of Lagrange's condition in the theory of maxima and minima of functions of two variables ...	158
Symmetrical solutions of problems respecting the straight line and plane. By <i>George Boole</i>	179
On singular points in surfaces. By <i>D. F. Gregory</i> ...	252

ALGEBRA.

On the transformation of an analytical expression	9
Researches in the theory of analytical transformations, with a special application to the reduction of the general equation of the second order. By <i>George Boole</i>	64
Demonstration of a proposition in the theory of numbers ...	79
Expression for any positive integral power of a logarithm ...	102
On the expansion of sines and cosines of multiple arcs in ascending powers of the cosines and sines of the simple arcs ...	129
On the expressibility of the roots of algebraic equations. By <i>J. M. Peebles</i>	145
On the equation of payments	188
On the development of the square roots of numbers by continued fractions. By <i>James Booth</i>	226
Examples of the dialytic method of elimination as applied to ternary systems of equations. By <i>J. J. Sylvester</i> ...	232
Practical rule for reducing a square root into a continued fraction	239
On the irrationality of ϵ	240
New solution of a cubic equation. By <i>J. Cochle</i> ...	248
On a method of algebraic elimination	276

DIFFERENTIAL AND INTEGRAL CALCULUS.

	PAGE
On singular solutions and particular integrals of differential equations. By <i>W. Walton</i> , Nos. I. and II. ...	24, 49
On the failure of formulæ in the inverse processes of the differential calculus ...	79
On certain theorems in the calculus of variations. By <i>George Boole</i> ...	97
On the integration of linear differential equations with constant coefficients. By <i>George Boole</i> ...	114
Series for the approximate values of definite integrals ...	167
On the integration of certain classes of differential equations. By <i>R. L. Ellis</i> , Nos. I. and II. ...	169, 193
Investigation of the radius of curvature in polar curves ...	191
Demonstration of a property of Laplace's coefficients ...	192
On the integration of equations of partial differentials. By <i>B. Bronwin</i> ...	209
Evaluation of a definite multiple integral. By <i>D. F. Gregory</i> ...	215
Remarks on Poisson's proof that $F(\mu, \omega)$ can be expanded in a series of Laplace's functions ...	223
Demonstration of the correctness of Fourier's expansions of functions in series consisting of sines or cosines only ...	258
On certain integral transformations. By <i>B. Bronwin</i> ...	263
Note on the definite integral	

$$\int_0^{\pi} \log (\sin \theta) d\theta \quad \dots \quad \dots \quad \dots \quad 282$$

Theorem respecting general differentials ...	284
Extension of a property of Laplace's functions to homogeneous functions generally ...	283

MECHANICS.

On the condition of equilibrium of a system of mutually attractive fluid particles ...	18
On a property of the brachystochrone when the forces are any whatsoever ...	45
Investigation of the angle between the apsides of the path of a projectile moving in a surface of revolution, when the orbit is nearly circular ...	62
On the sympathy of pendulums ...	120
On the tautochrome in a resisting medium ...	153
On the motion of a pendulum whose point of support is disturbed	204
On the form of a bent spring ...	250

ASTRONOMY.

Investigations of the variations of the node and inclination ...	113
Geometrical investigation of the aberration in right ascension and declination ...	120
Analytical solutions of problems in plane astronomy ...	178

LIGHT.

Method of finding the approximate values of definite integrals which occur in the calculations of diffraction ...	81
Note on the calculation of the intensity of light at the centre of the shadow of a small circular disk ...	141
On fringes of interference produced by oblique reflection at the surface of a small mirror. By <i>A. Bell</i> ...	245
Solutions of Senate-House Problems ...	94, 142, 143
